

Gaphyor System

J. L. Delcroix

This system is simply a computer-aided documentation data bank specialised in the physics and chemical physics of gases. The subject covered are the following:

- Properties of atoms and molecules,
- Elastic and inelastic collisions between photon, electron, atom, molecule
- Macroscopic properties of gases (neutral or ionized)

The data are however limited to not too complex chemical systems (no more than 2 chemical elements, molecules having no more than eight atoms).
